

A complete line of feeders and cutting equipment

40mm Tandem side feeder

Force feeder

Loss in weight feeder

APEX series with loss in weight feeding system

In support of a Ruiya Extrusion compounding line or to upgrade your existing equipment, Ruiya Extrusion offers the necessary feeding and cutting equipment for your application.

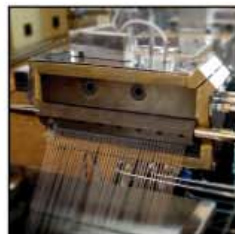

Feeder types

- Side Feeders
- Volumetric ingredient feeders
- Loss in weight feeders
- Cramming feeders
- Liquid feeders

Pelletizer types

- Strand pelletizers
- Water ring cutters
- Underwater pelletizers
- Die face cutters

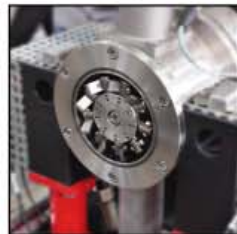

Stranding system

Water ring cutter

Die face cutting system

Underwater pelletizer

ECON and CPM cooperate to deliver the EUPC underwater pelletizer. ECON is a leader in underwater pelletizing technology and is the choice of many leading global producers. The EUPC is based on the design of the European EUP series and features the following:

1. Push-button start - automatic, fast and safe
2. No "freezing" of die holes due to the thermal insulation
3. CECONID® die plate - highly wear resistant for a long useful life
4. Constant pellet quality
5. Smallest possible pellets, even micro pellets
6. Compact unit, minimal space requirements, simple handling
7. Minimal energy consumption - highest energy savings
8. Low temperature water can be used as processing water
9. Optional components for your individual requirements
10. Low labor and maintenance costs
11. Bypass piping not required, less water loss
12. Continuous process water filtration, optional with automatic compact band filter
13. Easily accessible pellet dryer, free of dead spots for simple and safe cleaning
