CPM Extrusion Group shares their knowledge with their Extrusion Knowledge Center online portal

CPM Extrusion Group has launched in the beginning of May 2018 their brand-new Extrusion Knowledge Center where users can access the complete library of archived training webinars from their company website www.cpmextrusiongroup.com. Century Extrusion has been presenting free monthly training webinars since 2013 on all technical aspects of twin-screw extrusion technology and is now making this resource available online through the Extrusion Knowledge Center where more than 35 webinars can be downloaded or viewed online. Access to the Extrusion Knowledge Center will be provided for a modest fee.

Hosting online webinars as well as in-person training seminars and workshops places CPM Extrusion Group in the forefront of twin-screw extrusion training. The monthly webinars are one hour in length, are offered at no cost and include a question and answer session at the end of each presentation. Participants can ask questions via text message through the webinar interface and have their specific questions answered real-time. Many of the companies attending the webinars are from outside the United States, primarily in Asia. These are global resin suppliers and custom compounders who have limited access to such technical information.

Adam Dreiblatt, Century's Director of Process Technology is leading the 'e-learning' initiative. Each webinar is broadcasted live three times (9am, 2pm and 9pm EST) to correspond with EU and Asian time zones. The popularity of these web-based presentations has increased extensively with almost two hundred people attending each monthly webinar. "There is no shortage of twin-screw compounding extruders around the world, but the training and knowledge to operate, maintain and troubleshoot is missing" says Dreiblatt. "The Extrusion Knowledge Center is designed to provide 24/7 access to our learning portal for those customers who need it the most".

We will continue to provide the free monthly webinars to expand the Extrusion Knowledge Center portfolio with new titles. Upcoming webinar topics include extruder shaft design, maintenance best practices, purging/cleaning procedures and solutions for vent problems. For more information on the Extrusion Knowledge Center or to view the 2018 webinar schedule, please visit the CPM Extrusion Group website www.cpmextrusiongroup.com.
